BREAST CANCER

An Information Guide

by

Leading Lady Empire

Breast cancer is a disease that occurs when breast tissue cells grow out of control and form tumors.

The tumours can spread throughout the body and become fatal.

SYMPTOMS

***Lump in
the breast***

***Dimpling of
the skin***

***Change in
breast shape***

***Red or scaly
patch of
the skin***

***Swelling of
parts of breast***

DETECTION

MAMMOGRAGHY

An X-ray imaging technique that uses low doses of radiation to create pictures of the breast.

ULTRASOUND

A procedure that uses high-frequency sound waves to create images of the inside of the body.

MRI

A non-invasive medical imaging technique that uses radio waves and strong magnets to create detailed pictures of the inside of the body.

PREVENTION

Keeping weight in check

Being physically active

Eating fruits and vegetables

Breastfeeding

Avoiding birth control pills

***Avoiding hormone therapy
for menopause***

TREATMENT

Surgery

Removal of cancer through an operation.

Chemo Therapy

Drugs are used to kill or shrink the cancer.

Radiation Therapy

High-energy rays are used to kill the cancer.

Hormonal Therapy

Blocks the hormones that cancer cells need to grow.

Targeted Therapy

Drugs block proteins that help cancer cells grow.

Immuno Therapy

Immunotherapy Works with the body's immune system to fight cancer cells.
